

C++Builder 6 will not run in Windows Vista

概要: C++Builder 6 will not run in Windows Vista

After installing C++Builder 6 on Windows Vista, trying to launch the product will throw the following error:

Unable to rename 'C:\Program Files\Borland\CBuilder6\Bin\bcb.\$\$\$' to 'C:\Program Files\Borland\CBuilder6\Bin\bcb.dro'

This error occurs because Vista doesn't allow writing privileges by default to any directories in C:\Program Files (even if your username has Administrative rights).

The workaround for this is to right click on the product icon and choose: **Run as Administrator**.
